Engines 116, 117

Note

Check or adjust valve clearance with engine cold or warm. On engines 100 with cold engine only.

Note arrangement of intake and exhaust valves. In the case of engines 116 and 117 the valves on cylinders 4 and 5 are arranged asymmetrically.

Revision: Number of gauge holders reduced and text revised.

**Note**

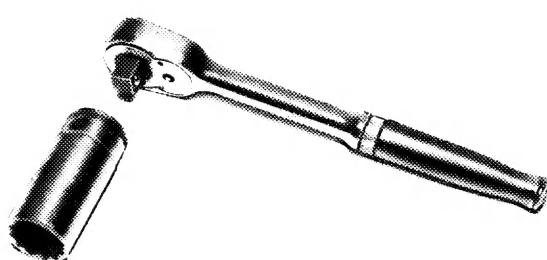

Check or adjust valve clearance with engine cold or warm.

Note arrangement of intake and exhaust valves.

**Adjustment**

- Remove rubber gaskets
- Measure valve clearance between sliding surface of rocker arm and cam base circle of camshaft (arrow).

Attention! Replace thrust piece (4), if adjustments can no longer be made as required. They are available in various thicknesses (see spare parts list).

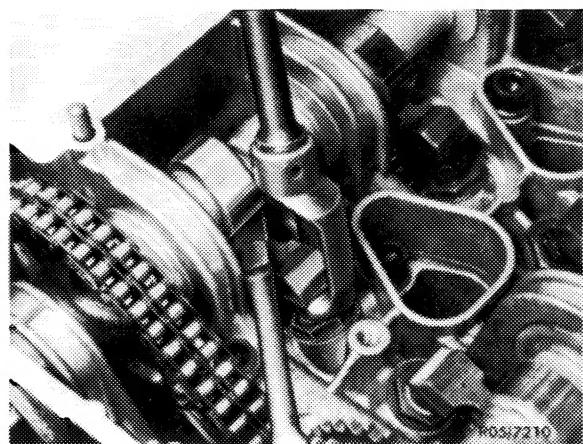

The engine can be cranked as follows:

- a) With combination tool on hex. bolt for attaching balancing disc to crankshaft.

Attention! The engine **must not** be turned using the hex.-hd. bolts on the **camshaft gears**.

Do **not** turn the crankshaft **backwards**.

- Check tensioning springs (1) for perfect seat upon completion of adjusting jobs.

If there is insufficient adjustment available replace pressure piece (3). They are available in various thicknesses (see Spare Parts Fiche).

If the torque of the adjusting screw is below 20 Nm (2 kpm) replace adjusting screw (2), or adjusting screw (2) with threaded bush (1).

Adjustment

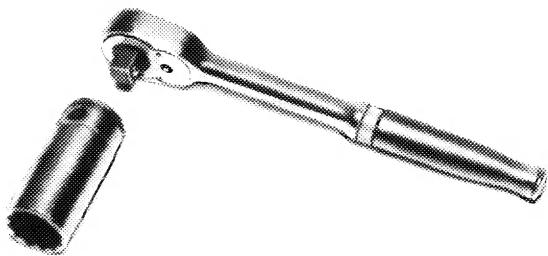

- Measure valve clearance between the sliding area of the rocker arm and the cam base circle of the camshaft (arrow).

For this purpose, the engine can be cranked as follows:

a) **By means of tool combination on hex. bolt for attaching balancing disc to crankshaft.**

Attention! The engine **must not** be turned using the hex.-hd. bolt on the **camshaft gear**.

Do **not** turn crankshaft **backwards**.

R 100/6498

b) **With starter and contact handle**

Models 114, 115

Connect contact handle to battery + and to starter terminal 50.

Disconnect terminal 1 on ignition coil.

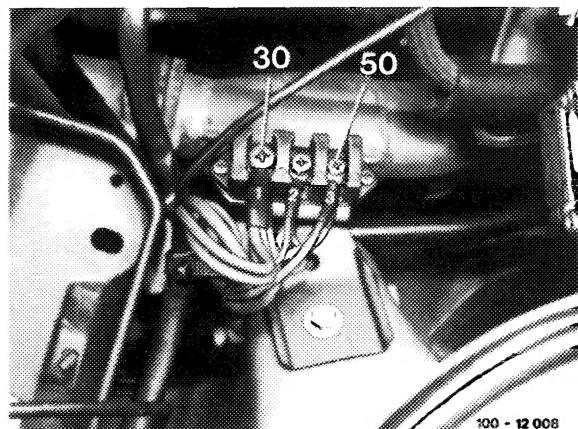

105-9061

Model 123.023

Connect contact handle to terminal 30 and terminal 50 on cable connector.

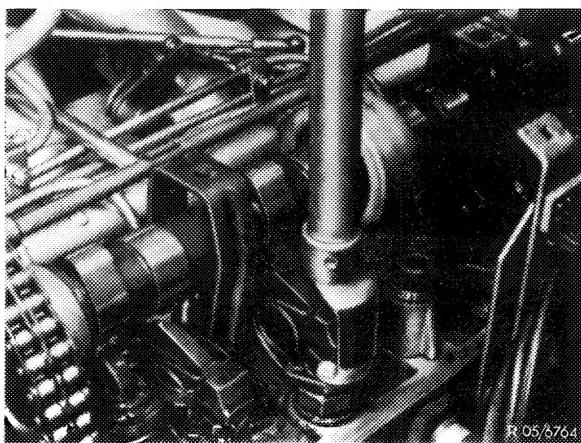

Instead of terminal 30, connection can also be made to battery +.

Disconnect terminal 1 on ignition coil.

100 - 12 008

Valve clearance is correctly adjusted, when the slip gauge indicates a tight fit.

- If required, adjust valve clearance by turning adjusting screw (2) with valve adjusting and torque wrench.
- Before fitting cylinder head cover, check seals and renew if found necessary.

Adjustment

- Measure valve clearance between slide area of rocker arm and cam base circle of camshaft (arrow). For this purpose, set camshaft in such a manner **that the tip of the cam is vertical** in relation to rocker arm.

Valve clearance is correctly adjusted, when the slip gauge indicates a tight fit.

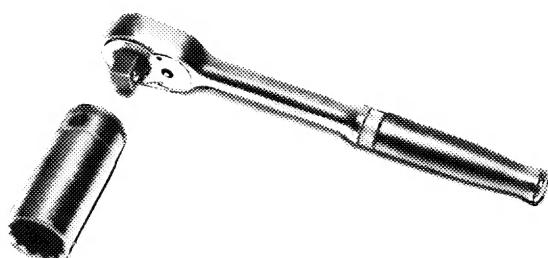

- Set start and stop cable to "Stop" or ignition key to "0".

For this purpose, the engine can be cranked as follows:

a) **By means of tool combination on hex. bolt for attaching balancing disc to crankshaft.**

Attention! The engine **must not** be turned using the hex.-hd. bolt on the **camshaft gear**.

Do **not** turn the crankshaft **backwards**.

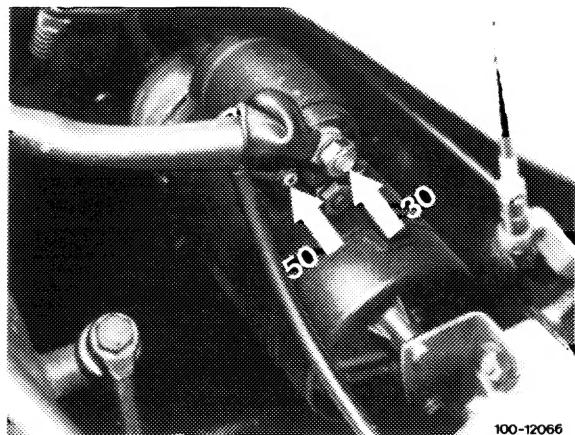

b) With starter and contact handle.

Models 115 and 123

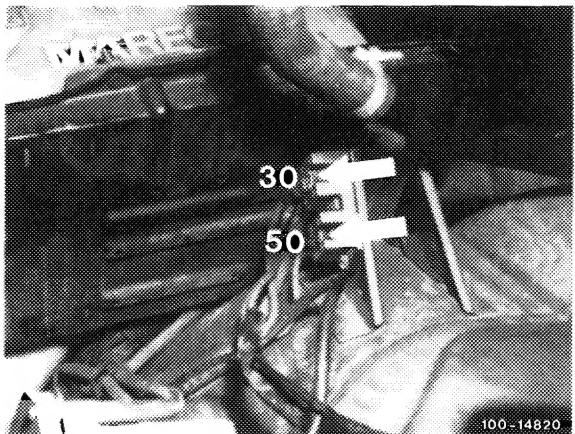

Connect contact handle to terminal 30 and terminal 50 on starter.

Instead of terminal 30, connection can also be made to battery +.

Model 116.120

Connect contact handle on cable connector below the battery to terminals 30 and 50.

- Fit holding wrench (17) onto hex. of valve retainer.
- Loosen cap nut (7), for this purpose counterhold hex.-hd. nut (8) on the valve with the valve adjusting wrench (14).
- Adjust valve clearance by turning the cap nut.
- After adjustment, lock cap nut by tightening the hex.-hd. nut.
- Recheck valve clearance.
- Before fitting cylinder head cover, check seals and renew if found necessary.
